

PUBLIC NOTICE TO WAVE CABLE TV CUSTOMERS IN SANDY AREA

Wave is taking the next step in a project that will bring our customers dramatically faster internet speeds, enhancements to our network reliability, and improvements to the service quality of all of our products.

We currently broadcast many TV channels simultaneously in both a legacy analog format and an efficient digital format. The analog channels take up bandwidth needed to provide faster internet speeds.

On **June 7th 2016**, we will begin broadcasting all the channels on our Expanded Content tier (channels 21 – 67) in pure digital format only. This will allow us to increase our bandwidth to provide faster internet speeds.

Wave digital equipment will be required to view the channels affected on our Expanded Content tier (channels 21 – 67) after Tuesday, June 7th. Details on the channels impacted and digital equipment options will be sent to customers in the mail.

This change will allow for immediate increased network capacity for improved service performance and reliability, and faster internet speeds coming soon.

Please call 1-866-928-3123 with questions. Thank you for choosing Wave.
