

## PUBLIC NOTICE TO WAVE CABLE TV CUSTOMERS IN SANDY AREA

Wave is taking the next step in a project that will bring our customers dramatically faster internet speeds, enhancements to our network reliability, and improvements to the service quality of all of our products.

We currently broadcast many TV channels simultaneously in both a legacy analog format and an efficient digital format. The analog channels take up bandwidth needed to provide faster internet speeds.

On **Tuesday, February 7th 2017**, we will begin broadcasting all the channels on our Local Broadcast and Expanded Content tiers (channels 2 – 792) in pure digital format only. This will allow us to increase our bandwidth to provide faster internet speeds.

**Wave digital equipment will be required to view the channels affected on our Local Broadcast and Expanded Content tiers (channels 2 – 792) after Tuesday, February 7th 2017.** Details on the channels impacted and digital equipment options will be sent to customers in the mail.

This change will allow for immediate increased network capacity for improved service performance and reliability, and faster internet speeds coming soon.

Please call 1-855-971-1245 with questions. Thank you for choosing Wave.
